- depolution system faulty and both engine management and SERVICE lights came on and I could not rev engine to more than 2k RPM. When I stopped and switched engine off, the automatic handbrake did not engage. It did engage manually after I turned the ignition on again (didn't switch the engine on).

Emission control system, in automobiles, means employed to limit the discharge of noxious gases from the internal-combustion engine and other components. There are three main sources of these gases: the engine exhaust, the crankcase, and the fuel tank and carburetor.

emission control system | Description, Components, & Facts ...
Bi-fuel vehicles are vehicles with multifuel engines capable of running on two fuels. On internal combustion engines one fuel is gasoline or diesel, and the other is an alternate fuel such as natural gas (CNG), LPG, or hydrogen. The two fuels are stored in separate tanks and the engine runs on one fuel at a time in some cases, in others both fuels are used in unison.

Bi-fuel vehicle - Wikipedia
