Labour constants may be roughly defined as a guide of "how much work someone can do in how much time". In reality, this is not an exact science and requires considerable experience, skill, intuition, historic data and some practical application & risk to define and to implement. There will be variations from project to project, site to site, sub-contractor to sub-contractor ... and these can be considerable.

Labour Constants - Cost Planner

as construction materials, construction labour, and the operating cost of construction equipment Each project can be finished when a certain amount of progress cost has been spent to complete and i are constants [DOC] Crafting And Executing Strategy 15th Edition

Download Construction Labour Constants A Ready Reckoner

Your labor burden costs are \$4,084 divided by 1,840 hours which is \$2.21 per hour. So now your labour costs are as follows: Lead: \$40/hr + \$2.21 = \$42.21. Framer: \$25+ \$2.21 = \$27.21. Apprentice: \$15+ \$2.21 = \$17.21. Your baseline for this crew is \$86.63 per hour.

Calculating Base Labor Rates for a Construction Crew ...

The construction industry, to which these craftsmen belong, is one of the most labor-intensive industries in the world. The labor cost component of a building project often ranges from 30 to 50%, and can be as high as 60% of the overall project cost. Therefore, it is clear that construction labor is a vital component of a construction project.

CHAPTER 4 COST OF CONSTRUCTION LABOR AND EQUIPMENT

labor budget (price) / actual base rate / crew size / hr/wk = \$55,000 / \$48/HR/M / 3-M CREW / 40 HRS/WK = 9.5 WEEKS In other words, each of the crew members can spend an average of 380 man-hours (9.5 weeks x 40 hrs/wk) on the project.

Labor Rate for Construction - How much to charge? - Shawn ...

Divide 5 minutes by 60 minutes - this will give you a labour constant of 0.08/m² of plasterboard. Multiply the measure (100 m²) by the constant (0.08/m²) to calculate your labour requirement in hours - 100 x 0.08 = 8 hours. Materials measurement and labour measurement are the first building blocks for pricing a job effectively.

Price right | Building Performance

The labour constants are for the major items of "on-site" works for which rates are given in the "Detailed Trade Rates" section. The constants are intended as an average guide only, and 'labour factor' could be considered a better term, as the labour content of work items can vary considerably depending on the circumstances.
