and sexual reproduction: There will come a time when not only gestation, i.e. ectogenesis, but also the entire duration of pregnancy will happen artificially. When it comes to that, assisted reproduction is bound to replace sexual reproduction. In other words, the end of sexual reproduction is not so far away.

advancements are rapidly changing the field of reproductive technology making procedures safer, more efficient, affordable and more accessible to many afflicted with infertility. In the last two decades, aneuploidy screening and genetic testing of embryos prior to their implantation became a routinely used practice to increase the chances of a healthy pregnancy.

The Future of Assisted Reproductive Technology - Part 2 ...

Medicine has made some remarkable advances in the field of reproductive technology. The term reproductive technology refers to various medical procedures that are designed to alleviate infertility, or the inability of a couple to produce a child of their own. These include artificial insemination, in vitro fertilization (or “test-tube” babies), and surrogate motherhood.

Reproductive technology encompasses all current and anticipated uses of technology in human and animal reproduction, including assisted reproductive technology, contraception and others. It is also termed Assisted Reproductive Technology, where it entails an array of appliances and procedures that enable the realization of safe, improved and healthier reproduction. While this is not true of all men and women, for an array of married couples, the ability to have children is vital. But through the
