Summary of Marginal Analysis vs. Incremental Analysis. While both marginal analysis and incremental analysis are important in decision making in a business, marginal analysis is an analysis of additional benefits based on an activity in comparison to additional costs incurred by the same activity especially where funds are limited while incremental analysis is a technique used to determine the true cost among alternatives in a business.

## **Incremental Cash Flow Definition**

The incremental cost-effectiveness ratio (ICER) is a statistic used in cost-effectiveness analysis to summarise the cost-effectiveness of a health care intervention. It is defined by the difference in cost between two possible interventions, divided by the difference in their effect. It represents the average incremental cost associated with 1 additional unit of the measure of effect.
