What an Engineer or Designer Should Consider Before Electroplating. Nesting of parts during the electroplating process. Since electroplating involves both an electrical and a chemical reaction at the surface of the part, exposure to the plating chemistry is critical to the overall performance of the finished product. Nesting of parts will result in a lack of adhesion or coverage on the surface ...

In the engineering field, electroplating has many benefits, including preventing corrosion, increasing conductivity and improving the durability of parts. What

# Read Online Electroplating Engineer

Engineers Should Consider Before Electroplating. With many types and methods of electroplating available, you must determine the right process for the size and volume of parts you have.

## **Things Engineers Should Know About Electroplating**

Electroplating is a general name for processes that create a metal coating on a solid substrate through the reduction of cations of that metal by means of a direct electric current. The part to be coated acts as the cathode (negative electrode) of an electrolytic cell; the electrolyte is a solution of a salt of the metal to be coated; and the anode (positive electrode) is usually either a block ...
