Inflation, in economics, collective increases in the supply of money, in money incomes, or in prices. The term most often refers to increases of the last type. Four of the principal theories of inflation are the quantity theory, the Keynesian theory, the 'cost-push' theory, and the structural theory.

Inflation is now considered an extension of the Big Bang theory since it explains the above puzzles so well, while retaining the basic paradigm of a homogeneous expanding universe. Moreover, Inflation Theory links important ideas in modern physics, such as symmetry breaking and phase transitions, to cosmology.
