### [DOC] Introduction To Subsea Production

For subsea production systems, subsea separation systems can reduce water flow in subsea flowlines. The advantage of applying subsea separation is not only hydrate control, but also increasing recovery of reserves and/or accelerating recovery by making the produced fluid stream lighter and easier to lift.

April 2017 G. Moricca 26 In subsea oil/gas production systems, a subsea jumper is a short pipe connector that is used to connect manifold systems to wells, sleds to wells and/or manifolds to sleds. Another word the subsea jumper is used to transport production fluid between two subsea components, for example, a tree and a manifold, a manifold and another manifold, or a manifold and an export sled. Commonly, subsea jumper is classified into two categories which are flexible and rigid jumpers.
