Island

Island, any area of land smaller than a continent and entirely surrounded by water. Islands may occur in oceans, seas, lakes, or rivers. A group of islands is called an archipelago.

island | Definition, Types, Examples, & Facts | Britannica

An island or isle is any piece of sub-continental land that is surrounded by water. Very small islands such as emergent land features on atolls can be called islets, skerries, cays or keys. An island in a river or a lake island may be called an eyot or ait, and a small island off the coast may be called a holm.

Island - Wikipedia

Island can be traced back to Old English *īgland*, composed of two elements *īg* and *land*. *Land*, as we might expect means “land,” but *īg* means “island” in Old English. In a sense, then, *īgland* is “island-land.” The English *isle*, on the other hand, is derived through medieval French from the Latin *insula*.

large enough to be called a continent. something resembling an island, especially in being isolated or having little or no direct communication with others.

Island | Definition of Island at Dictionary.com

The island is composed primarily of basalt, a low-silica lava associated with effusive volcanism as has occurred also in Hawaii. Iceland, however, has a variety of volcanic types (composite and fissure), many producing more evolved lavas such as rhyolite and andesite. Iceland has hundreds of volcanoes with about 30 active volcanic systems.
