NPTEL :: Civil Engineering - Optimization Methods

Optimization is a mathematical discipline that concerns the finding of minima and maxima of functions, subject to so-called constraints. ORIE faculty work on semi-definite programming, second-order cone programming, and large-scale multi-period stochastic optimization problems, in addition to convex analysis and non-smooth optimization—areas beyond the realm of traditional calculus.

Note that minimizing $f(x)$ is the same as maximizing $-f(x)$. We will discuss various examples of constrained optimization problems. We will also talk briefly about ways our methods can be applied to real-world problems. 1.3 Representation of constraints We may wish to impose a constraint of the form $g(x) \leq b$.
