Despite its name, a solution is not an "answer". It's simply a container for one or more related projects, along with build information, Visual Studio window settings, and any miscellaneous files that aren't associated with a particular project. A solution is described by a text file (extension .sln) with its own unique format; it's not intended to be edited by hand. Visual Studio uses two file types (.sln and .suo) to store settings for solutions:

Visual Studio has two kinds of project organization file formats: projects and solutions. Solutions are essentially groups of projects. Most software applications involve more than one project, and so virtually every software application has a solution file organizing said projects. Sometimes, solutions have more than one application in them. Or they have lots of unrelated projects in them.
