## **Homemade Rock Candy | Experiments - The Lab**

Rock candy is candy made of large sugar crystals. To make rock candy, a supersaturated solution of sugar in water is created and left undisturbed for a few days. The driving force behind crystallization is supersaturation. So the crystallization of sugar occurs in the solution, but what happens if we add other cooking ingredients to the solution?

## **Rock Candy Your Body: Exploring Crystallization**

The lower the temperature, the more molecules join the sugar crystals, and that is how rock candy is created. Small crystals of fudge Rock candy is made of large crystals of sugar, but other candies, such as fudge, contain smaller crystals of sugar.
