A Tutorial on Socket Programming in Java

The socket Application
Programming Interface
(API) functions are
described in this
section. Sockets are
the fundamental basis
of client server
programming.

Generally, socket

ServerSocket classes are used for connection-oriented socket programming and DatagramSocket and DatagramPacket classes are used for connection-less socket programming. The client in socket programming must know two information: IP Address of Server, and; Port number. Here, we are going to make one-way client and server
