JavaScript

Logic in programming is a fundamental key to be a good developer. Maybe, depending of your job place you are going to use more algorithms or not. If you are a web designer probably you are not going to deal with complex algorithms, but if you are front-end developer maybe a little more and if you are a back-end developer much more.

5 points to improve your programming logic

Photo by Mimi Tian on Unsplash. Javascript is a flexible programming language. People who are familiar with programming languages like Java, C++, may have difficulties in using Javascript. Those languages are object-oriented, unlike classic Javascript (ES5). However, Javascript has evolved a lot in the last years.

Understanding TypeScript Basics

The following code adds a color property with value "original color" to all objects of type Car, and then overwrites that value with the string "black" only in the instance object car1. For more information, see prototype .
