VANOS is a variable valve timing system used by BMW on various automotive petrol engines since 1992. The name is an abbreviation of the German words for variable camshaft timing: variable nockenwellensteuerung.. The initial version (retrospectively renamed "single VANOS") was solely used on the intake camshaft, while the later "double VANOS" systems are used on intake and exhaust camshafts.

control the position of the intake and exhaust camshafts. The system uses a gear on the Vanos actuator and a gear on the camshaft. A solenoid then controls the amount of oil pressure being applied which controls the movement of the cam gear outward or inward, effectively controlling the timing of the valves.

Double VANOS variable camshaft timing system. Both the intake and the exhaust cam timing is controlled by the VANOS system. As the system components age, the seals on the VANOS pistons wear and harden, reducing their seal and wearing the pistons themselves. This causes a rattling noise, rather like a diesel sound.
